Umbilical Cord Blood Stem Cell Grafts

- Advantages
 - Readily available stem cells source
 - Tolerance across HLA barriers
 - Nearly 30 year of experience
 - Less chronic GvHD vs. Matched Unrelated donor
 - *Eapen M et al Lancet 2010*
 - Potent anti-tumor activity
 - *Milano F et al NEJM 2016*
- Disadvantages
 - Low stem cell dose
 - Delayed hematopoietic recovery
 - Delayed immunologic recovery
 - Increased transplant-related morbidity and mortality
 - Increased resource utilization

Potential Solution

Ex-vivo Expansion Cord
Blood Stem Cells

Nicotinamide Alters Metabolic Pathways Mimicking Bone Marrow Endosteum

Importance of Nicotinamide

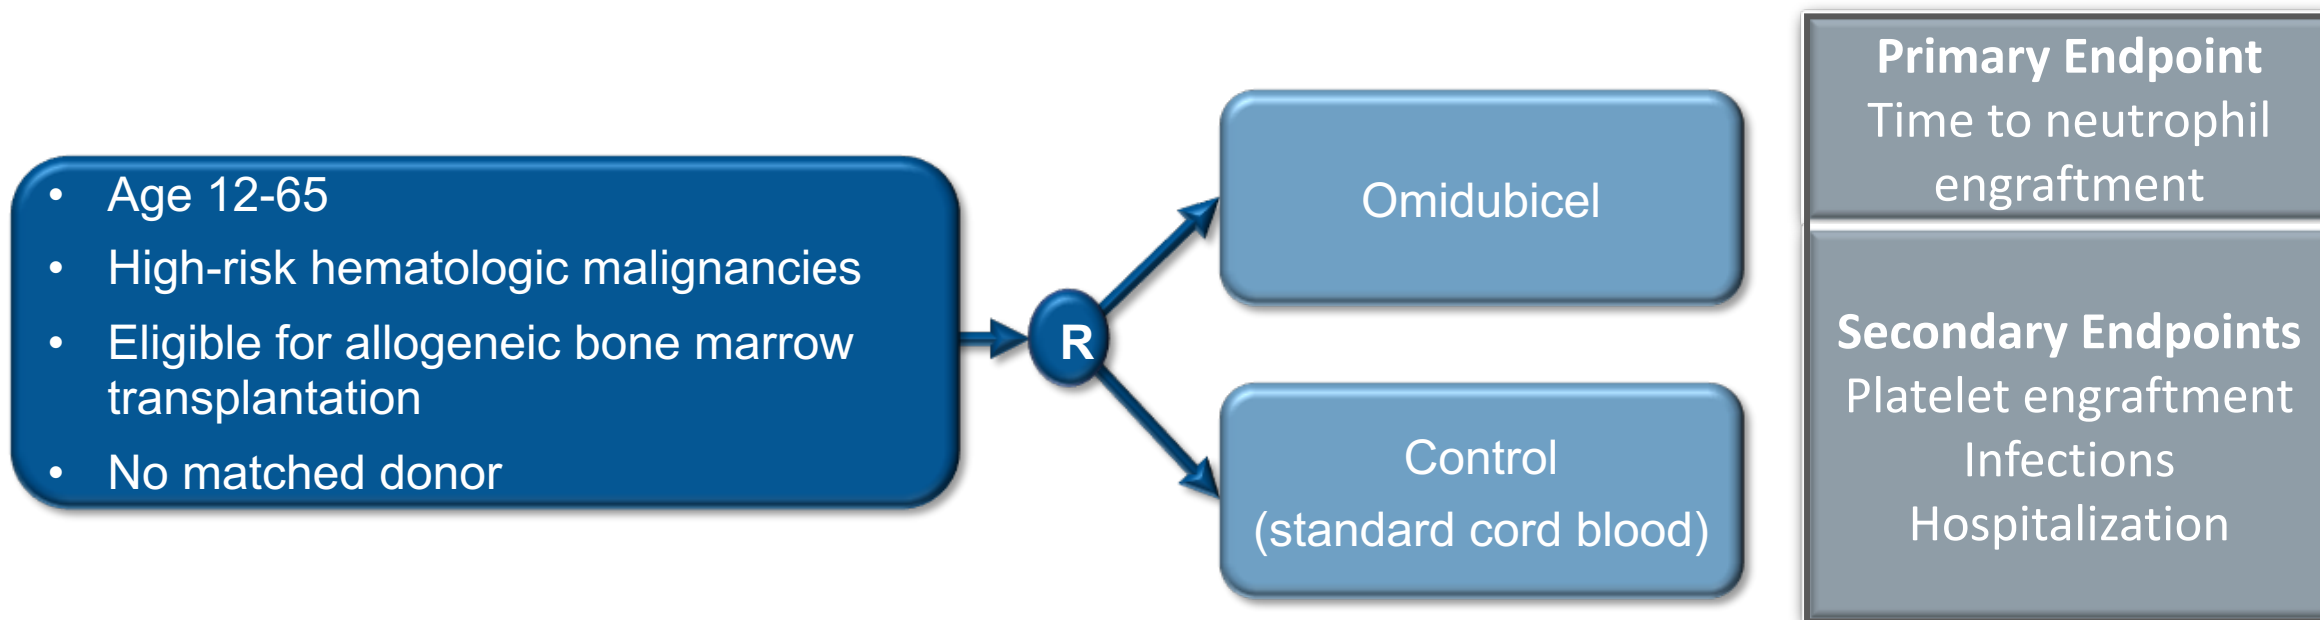

- Plays a key role in metabolic reprogramming of cells
- Is a master regulator of NAD-related signaling pathways
- Directly involved in control of redox-sensitive enzymes
- Preserves cellular functionality and phenotype during expansion

CD133- Fraction

CD133+ Fraction

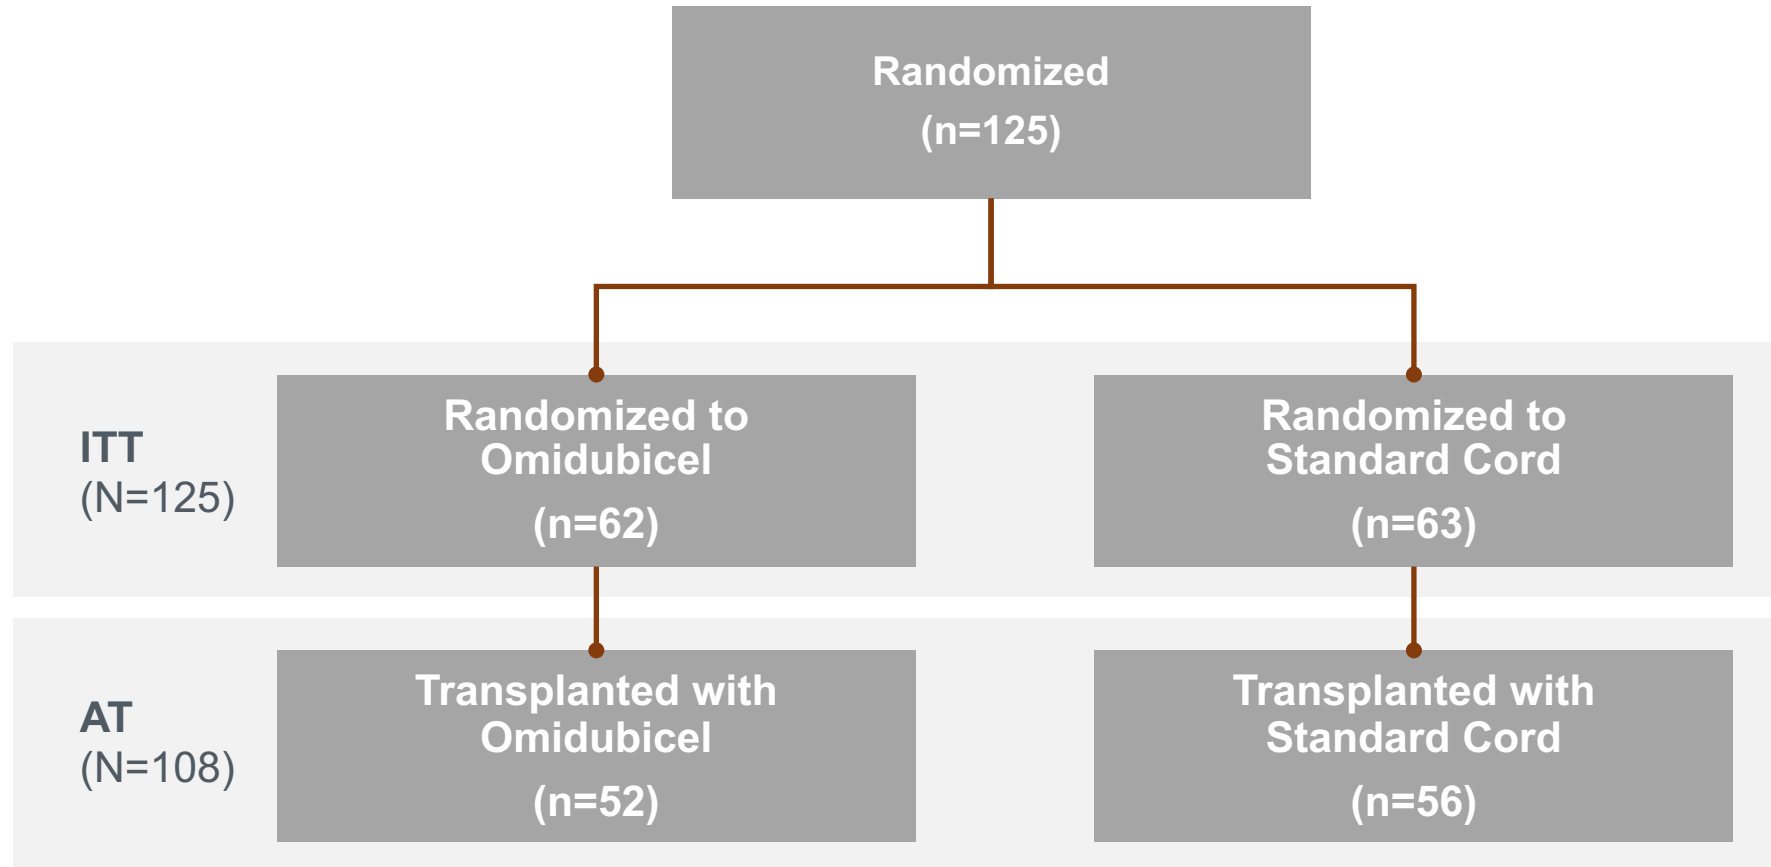

Phase 3 Registration Study of Omidubicel

- Cord blood units selected prior to randomization
- Randomization stratified by:
 - Treatment center
 - Disease risk index
 - Age
 - Intent to perform single vs double cord transplant in the control arm
- Minimization algorithm was used to balance prognostic factors in the treatment groups.

Enrollment Completed: 12/2019
Day 180 Follow Up Completed: 9/2020

Patient Disposition

ITT: Intent to Treat; AT: As Treated population: received transplantation with omidubichel or standard cord per protocol.

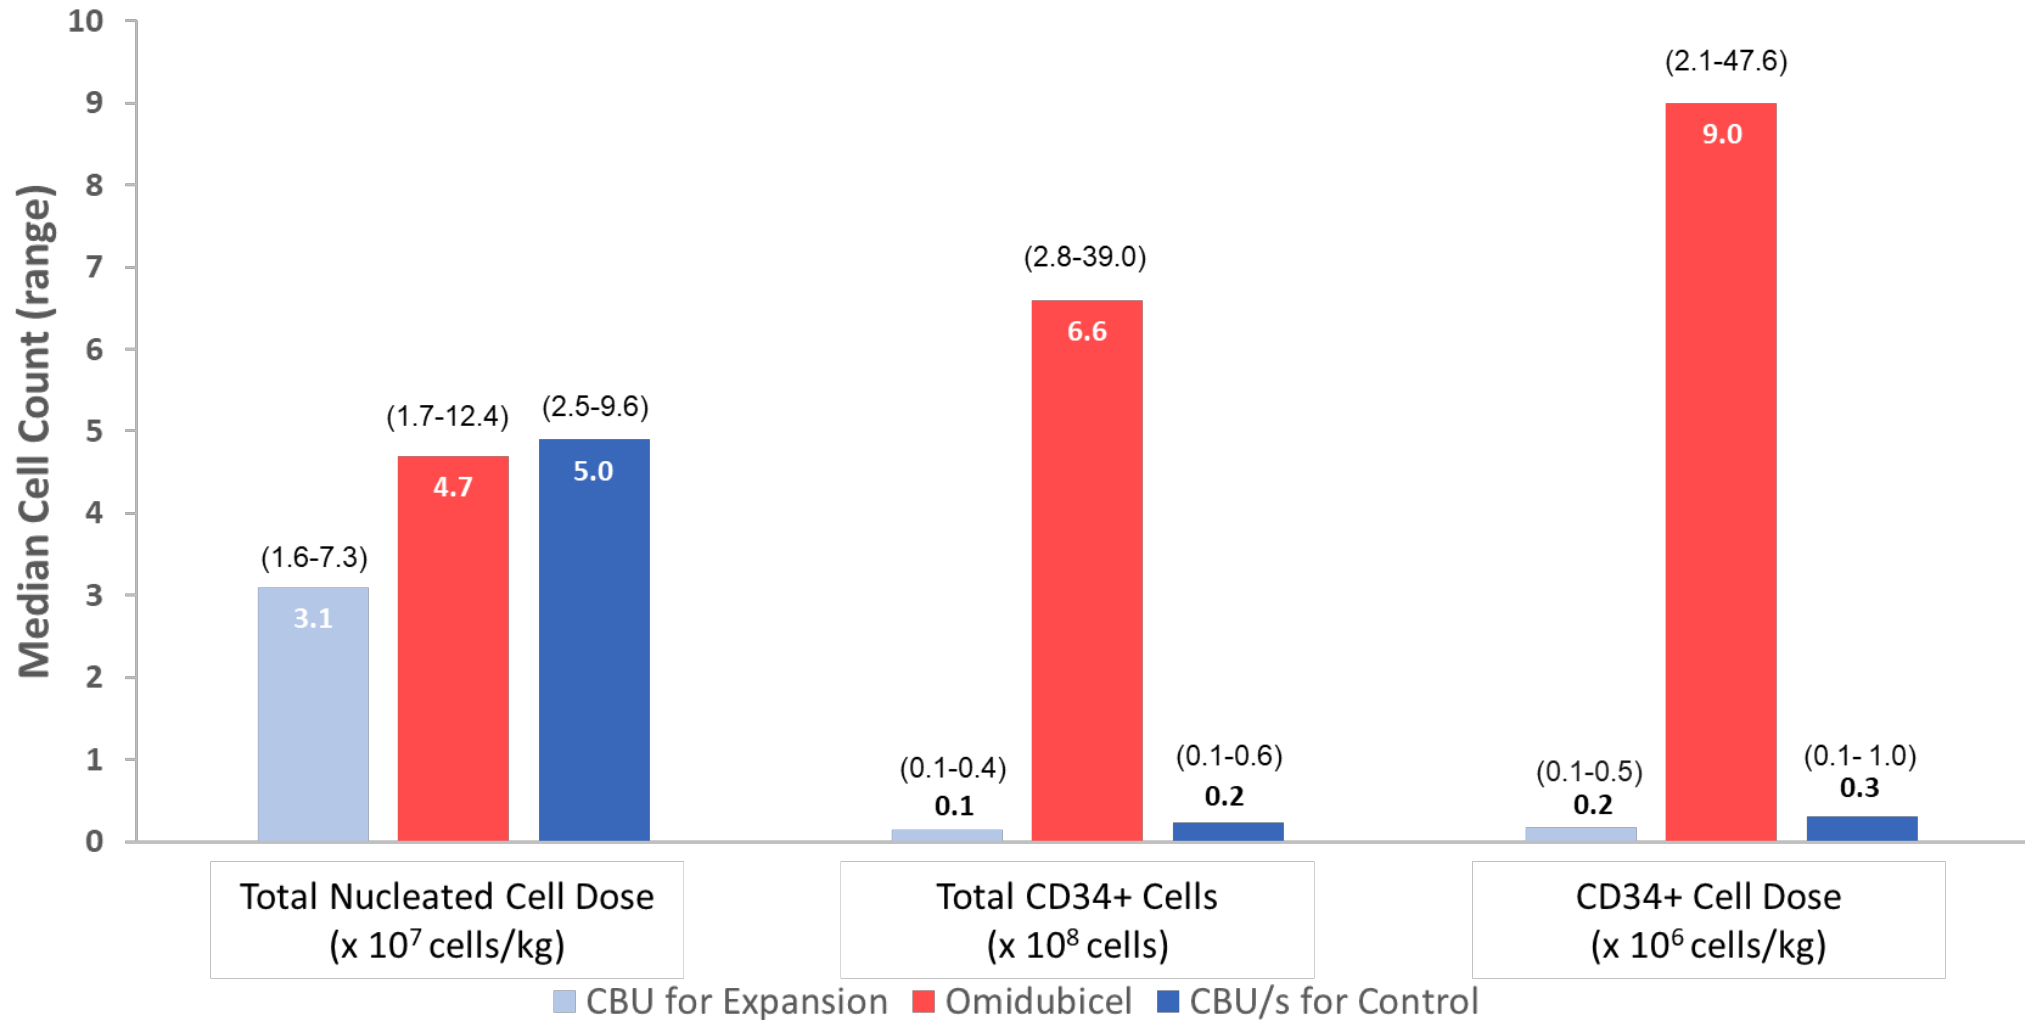

Demographics | Intent-to-Treat (ITT) Population

| | | Omidubicel (N=62) | Control (N=63) |
|------------------|----------------|----------------------|-------------------|
| Gender | Female | 30 (48%) | 23 (37%) |
| | Male | 32 (52%) | 40 (63%) |
| Age (y) | Median (range) | 40 (13-62) | 43 (13-65) |
| | 12-17 | 8 (13%) | 6 (10%) |
| | 18-39 | 23 (37%) | 23 (36%) |
| | 40-59 | 27 (44%) | 31 (49%) |
| | 60-65 | 4 (7%) | 3 (5%) |
| Weight | Median (range) | 78.6 (43-134) | 77.4 (46-133) |
| Race | White | 35 (57%) | 37 (59%) |
| | Black | 11 (18%) | 9 (14%) |
| | Asian | 7 (11%) | 10 (16%) |
| | Other/Unknown | 9 (15%) | 7 (11%) |
| Ethnicity | Latino | 10 (16%) | 6 (10%) |

Patient and Transplant Characteristics

| | | Omidubicel (N=62) | Control (N=63) |
|---|---|----------------------|-------------------|
| Disease | AML | 27 (44%) | 33 (52%) |
| | ALL | 20 (32%) | 21 (33%) |
| | MDS | 6 (10%) | 3 (5%) |
| | CML | 4 (7%) | 2 (3%) |
| | Lymphoma | 3 (5%) | 2 (3%) |
| | Rare Leukemia | 2 (3%) | 2 (3%) |
| Myeloablative Conditioning Regimen | TBI 1350cGy, Fludarabine, Thiotepa | 7(11%) | 9(14%) |
| | TBI 1320cGy, Fludarabine, Cyclophosphamide | 24(39%) | 21(33%) |
| | Thiotepa, Busulfan, Fludarabine | 27(44%) | 28(44%) |
| | Transplanted off-study | 4(6%) | 5(8%) |
| HLA match (CBU #1) | 4/6 | 46 (74%) | 46 (73%) |
| | 5/6 | 15 (24%) | 16 (25%) |
| | 6/6 | 1 (2%) | 1 (2%) |
| Intended CBU transplant | Single | 20 (32%) | 21 (33%) |
| | Double | 42 (68%) | 42 (67%) |

Graft Characteristics

Primary Endpoint

Time to Neutrophil Engraftment (ITT)

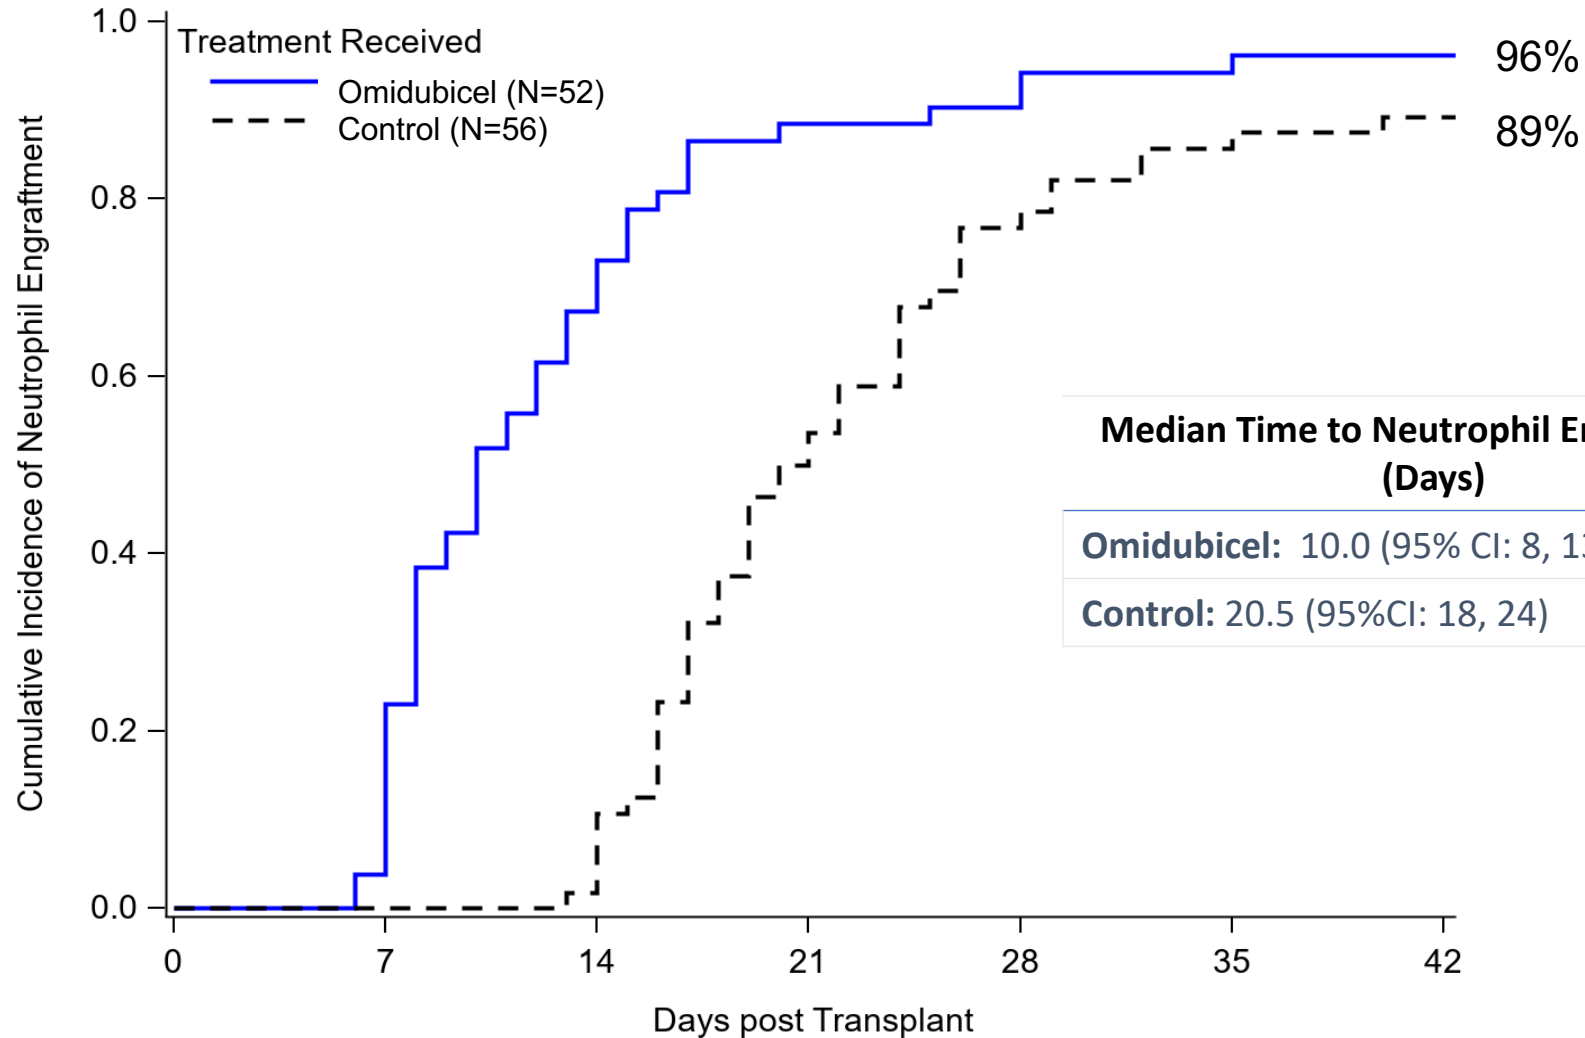

| Intent-to-treat | Median Time to Neutrophil Engraftment (Days)* | 95% CI | |
|---------------------|---|--------------|-----------|
| Omidubicel (N = 62) | 12.0 | (10.0, 15.0) | p<0.001** |
| Control (N = 63) | 22.0 | (19.0, 25.0) | |

*Patients not transplanted or who do not engraft on/before Day 42 post transplant were assigned to Day 43

**Mann-Whitney test

Day 42 Neutrophil Engraftment

(As-Treated Population N=108)

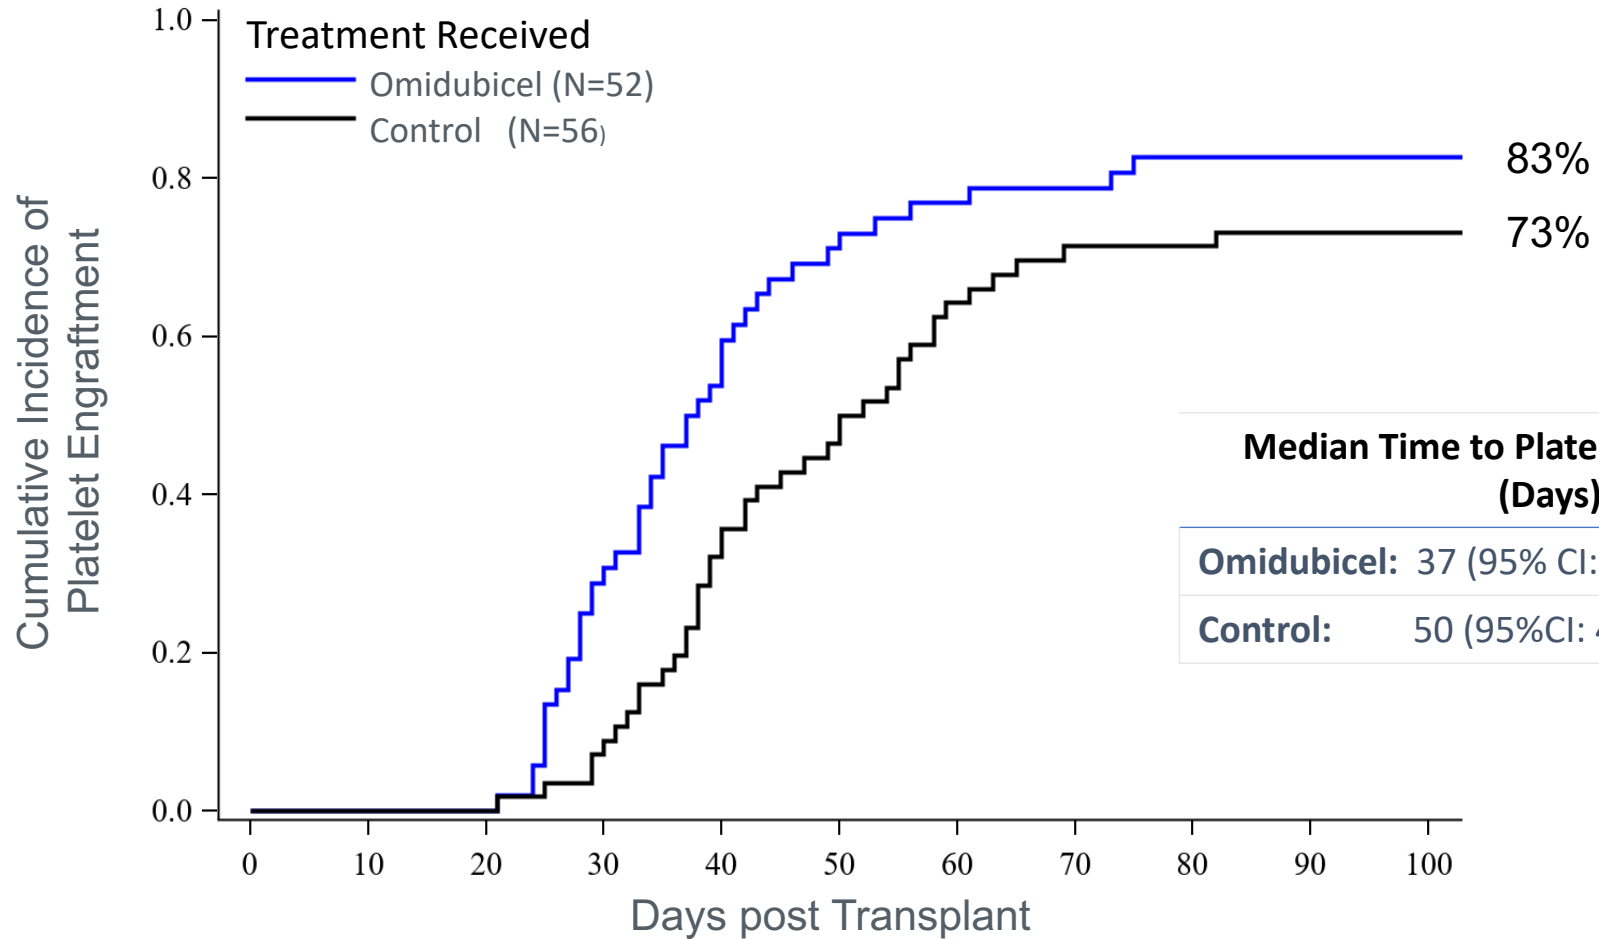

| Median Time to Neutrophil Engraftment (Days) | P value |
|--|---------|
| Omidubice: 10.0 (95% CI: 8, 13) | p<0.001 |
| Control: 20.5 (95%CI: 18, 24) | |

Secondary Endpoint: Platelet Engraftment by Day 42 (ITT Population)

| Intent-to-treat | Day 42 Cumulative Incidence | Difference in Cumulative Incidence | 95% CI | P-Value |
|---------------------|-----------------------------|------------------------------------|--------------|---------|
| Omidubicel (N = 62) | 0.55 | 0.20 | (0.03, 0.35) | 0.028 |
| Control(N = 63) | 0.35 | | | |

Day 100 Platelet Engraftment

As-treated population

| | N at risk | | | | | | | | | | |
|--------|-----------|----|----|----|----|----|----|---|---|---|---|
| NiCord | 52 | 52 | 52 | 36 | 22 | 12 | 7 | 5 | 3 | 3 | 2 |
| UCB | 56 | 56 | 56 | 51 | 35 | 23 | 11 | 7 | 7 | 6 | 4 |

Secondary Endpoint: Grade 2-3 Bacterial or Invasive Fungal Infection by 100 Days (ITT Population)

Fewer Viral Infections in Recipients of Omidubicel

Secondary Endpoint: Days Alive and Out of the Hospital in the First 100 Days Post-Transplant (ITT Population)

Omidubicel: Median 60.5 days
Control: Median 48.0 days
p = 0.005

Acute GvHD

Grade II-IV Acute GVHD Day 100

Grade III-IV Acute GVHD Day 100

Chronic GvHD

All Grades Chronic GVHD 1 Year

Non-relapse Mortality and Relapse (ITT Population)

Non-relapse Mortality

Relapse

| | | | | | | | | |
|-------------|----|----|----|----|----|----|----|----|
| Omidubichel | 62 | 60 | 60 | 60 | 55 | 51 | 50 | 46 |
| UCB | 63 | 60 | 58 | 53 | 50 | 48 | 43 | 40 |

| | | | | | | | | |
|-------------|----|----|----|----|----|----|----|------------------|
| Omidubichel | 62 | 60 | 55 | 50 | 41 | 37 | 26 | 24 ¹⁹ |
| UCB | 63 | 58 | 50 | 43 | 37 | 32 | 25 | 18 |

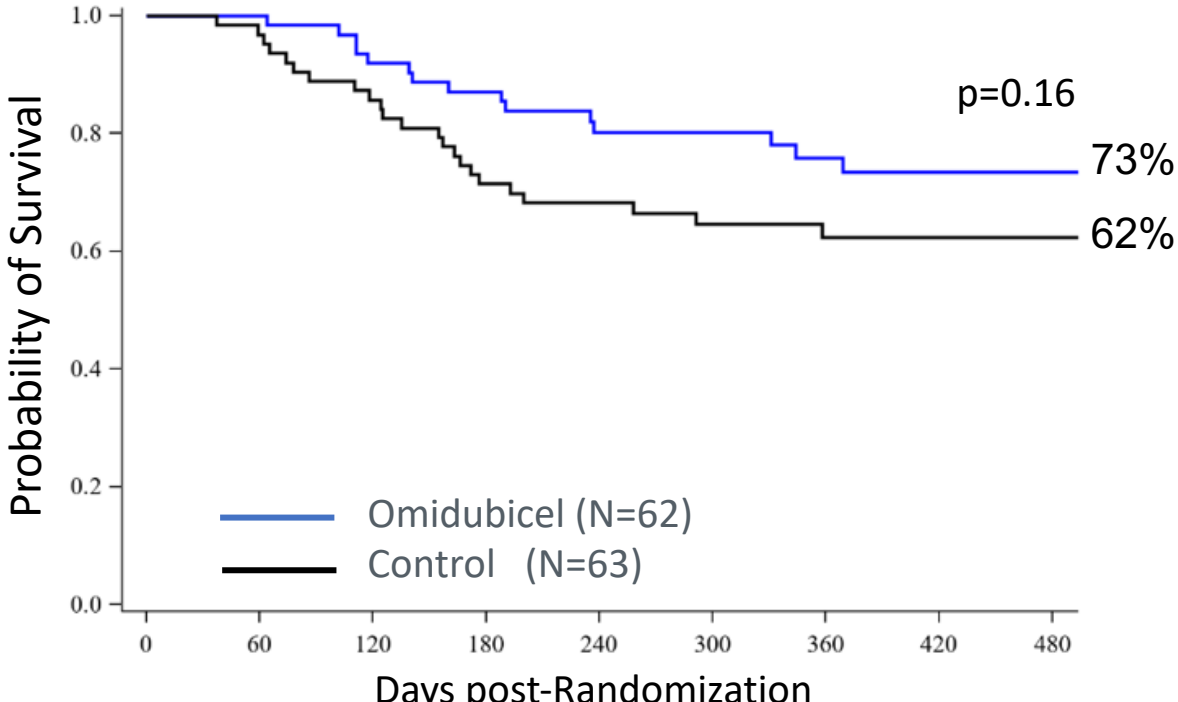

Disease-free and Overall Survival (ITT population)

Disease-free Survival

| | | N at risk | | | | | | | | | |
|-------------|----|-----------|----|-----|-----|-----|-----|-----|-----|-----|--|
| | | 0 | 60 | 120 | 180 | 240 | 300 | 360 | 420 | 480 | |
| Omidubichel | 62 | 60 | 55 | 50 | 41 | 37 | 26 | 24 | 6 | | |
| UCB | 63 | 58 | 50 | 43 | 37 | 32 | 25 | 18 | 9 | | |

Overall Survival

| | | N at risk | | | | | | | | | |
|-------------|----|-----------|----|-----|-----|-----|-----|-----|-----|-----|--|
| | | 0 | 60 | 120 | 180 | 240 | 300 | 360 | 420 | 480 | |
| Omidubichel | 62 | 62 | 57 | 54 | 44 | 42 | 32 | 30 | 6 | | |
| UCB | 63 | 61 | 54 | 45 | 40 | 33 | 27 | 20 | 9 | | |

Summary and Conclusion

- Myeloablative transplantation with omidubicel results in
 - Faster hematopoietic recovery
 - Fewer early infections
 - Fewer days in the hospital
- No excessive toxicity associated with omidubicel compared to standard umbilical cord blood transplantation
 - Durable engraftment >10yrs (earlier studies)
- Omidubicel should be considered a new standard of care for patients eligible for umbilical cord blood transplantation
